

VIALTRACK™

Identification, Storage, Audit & Compliance System

Improving Regulatory Compliance

VIALTRACK™

VialTrack™ is an electronic identification, storage, audit and compliance system for vial samples stored in ultra low temperature freezers.

The system manages any type of sample stored in a cryogenic vial, ideal for laboratories including medical, pharmaceutical and veterinary, as well as research and storage facilities.

VialTrack™ is easy to use, assisting in the effective and efficient management of vial samples and maintaining regulatory compliance.

Managed & Secure Storage

Operational at -86°C VialTrack™ provides continuous monitoring, vial identification, handling information and complete storage records.

System access control identifies personnel, logs users activities and prevents unauthorised access and use of the system.

Alerts can notify authorised personnel of any activity including, freezer temperature, security breaches and system discrepancies. These can be setup using local audible alarms and through text messaging, pagers and email.

Vial Identification

Storage vials are manufactured with an integrated chip, each containing its own unique identification number. The identification and contents of each vial is entered and stored onto the VialTrack™ database.

Vials are held in boxes or racks, which are placed onto specially manufactured shelves inside the freezer.

Software Management

VialTrack™ software provides a comprehensive management tool and full audit trail capabilities.

The software manages individual vial samples and multiple stock, stored in either single or multiple freezers.

Identification, Storage, Audit & Compliance System

Adding and removing boxes, racks and vials to and from a freezer is fully managed with every action recorded.

Detailed reports and full audits can be performed within a matter of minutes. Users can quickly and easily search for individual samples and investigate any stock discrepancies.

Information including vial history, user activities and location are all viewable from a desktop computer without opening a freezer.

Minimising the need to open a freezer and manually search for vials greatly improves efficiency within any laboratory.

Good Practice & Compliance

Vial Track™ helps laboratories to facilitate good practice and comply with regulations regarding the storage, handling and security of stored vials.

Our Service

Avonwood offer a complete system including hardware, software and integration. Our services include site surveys, installation, training, through life maintenance and customer support.

- *Operational at -86 °C*
- *Secure Access Control*
- *Managed Storage*
- *Unique Vial Identification*
- *Full Auditing & Reports*
- *Facilitates Good Practice*
- *Comply with Regulations*
- *Easy to Use*

Contact Us

We would welcome the opportunity to discuss your interest in the VialTrack™ system.
